Prerequisite Assessment
- Submit screenshots of Linux CLI environment.

Assessment 1: Understand the REPL concepts
- Display messages to terminal using **echo**

Assessment 2: Understand directory tree structures and relative/absolute path
- Given a directory tree, require students to provide/select the correct command to change from one directory to another.
- Given a directory and a sequence of command, ask students to provide/select the correct outcome of pwd.

Assessment 3: Creating/editing files
- Ask students to create a file with some contents.
- Ask students to download an existing file and modify its contents.

Assessment 4: Deleting files/directories
- Ask students to download a zipped file containing some directory structures, then to delete certain directories/files.
